

CROP CIRCLES – A BIBLICAL PERSPECTIVE

INTRODUCTION

One of the greatest mysteries of this millennium is the crop circle. These patterns in grain have been recorded on videotape forming in seconds in fields of standing oats and wheat. Explanations run the full range of speculation, from hoaxes to messages from the Aliens that seem to be flying everywhere in our skies, except when a scientist is around to verify them. The circles have been associated with cattle mutilations, secret CIA helicopters, and the organized schemes of practical jokers. Some say mother earth is trying to send us a message; others feel that they are positive proof of alien contact. But all seem agreed that, except for a bare handful of earlier reports, they are a new phenomenon since about 1982.

This study will lay out a simple theory that explains what they are, how they get there, and why they are happening now. In so doing, we will see that not only do they affirm that God is still on the throne, and that His Word still stands unchanged and affirmed, but also that Satan is very much alive and is trying some currently unknown (though not new - See Eccl.1: 9) methods of drawing our faith and attention away from the eternal Father, His Redemptive Word Jesus, and ever-working Holy Spirit. The devil is trying to replace faith in the true God with the belief that Aliens from other planets are our source and ultimate messiah.

HISTORY AND HUMAN NEED

The simple truth is that God created this earth for US, humankind (Ps. 115:16), with full rights to rule it and form it however we see fit (Gen. 1:28). The earth, then, must have been created to respond to our choices. Now, certainly, the sin in the garden has warped our sensibilities as to what God would have us do, and just as certainly, we have given the world to Satan (Luke 4:6). But Jesus earned it back (Rom. 6:17), and then sent the Spirit, Who poured out His gifts on all FLESH (Acts 2:17). Notice,

it does not say on all BELIEVERS, but on all FLESH. The Greek "sarka" means that the gifts extend to the saved, the unsaved, the Devil Worshipper, and even to animals, all of whom are "sarka", or "flesh". How can anyone be surprised, then, that the earth is doing some strange things? If some people who have not been trained in the realities of the Gospel and the rights of the children of God (Heb. 5:14) have miraculous power, and lack the discernment to use it wisely, the earth SHOULD be responding to some strange and ungodly promptings indeed. It is simply people's deeply felt longing for salvation, and their conflict of running from and trying to deny the promptings of grace in their lives that is writing itself on the land. The people of God need to be able to discern this message and answer with the Gospel that can save souls and redirect the miraculous energy they possess. This is the simple statement of the reason why. However, it needs proof, and the proof will come from the explanation of the laws of nature that make it happen as stated:

HIGHER DIMENSIONS AND STATIC FIELDS

When the average person watches the computer-generated video of a starship "warping into hyperspace", he does not normally think about the mathematics underlying the pretty colors. When Einstein tried to equate space and time by using the speed of light, he was drawing on ideas that were several hundred years old. Almost two centuries ago, mathematicians had shown that human beings could not exist in less than three dimensions. You can see why for yourself very easily if you try to draw a picture of the insides of a human being. If we were two dimensional, like a picture, our nerves could not reach our muscles without cutting through each other; we couldn't move. In three dimensions, the nerves can cross over or under, and thus not cut each other. Without motion, we couldn't serve God.

About ten years ago, mathematicians made an astonishing discovery: if our minds were in any dimension but the fourth, we couldn't change our minds; conversion would be impossible. The proof is too complex to give here. Since our minds need to be able to perceive God and then change to accept His call, we must have something we call time. There must be a past when we were in

sin, and a future when we will be saved. One dimension must be used for this, and three for our bodies.

God always creates more than He needs. After all, if you were omnipotent and wanted to show your love, you would too. Look at how many seeds fall every year from every tree. Yet, how many will grow to full height and bear their own fruit? If even one in a thousand became an adult tree, there would be no room in the forest for any other plant or animal. It is the same with human beings. Even Abraham, whom God called to father a nation when he was an old man, had enough extra seed to father not only Israel, but through Ishmael, several modern Arabian countries as well! It is the same with dimensions: God made an infinite number of them. Man, in his need to move and be able to convert, chose and settled into the world of four, and thus ignores the rest.

And then too, we forget so easily what we knew when we were in the Garden. In our attempt to avoid the mistakes of overbearing church shepherds who ruled at the end of the first millennium, we trust science, not faith, to teach us the ways of the earth. Science, by its own choice, can never look beyond observed creation to find out how earth is made. It can only experiment and catalog what it sees that God has already done. As long as our faith is in science, we will never see what can be, but only what has already been created by the faith of past ages. So we forget the real reason that earth is four dimensional, and instead create for ourselves a mythology of space travel, compatible with science and its limited vision. And since our need is to reach beyond earth to God, we fly in story to other galaxies. But since we need as well to be apart from God to learn our own sinfulness, we give the planets great distances. To span the distances we place on them, we replace conversion from sin to faith in extraterrestrials who can do space-time travel, and the hyperspace jump is born. Its colors SHOULD be beautiful, for it is the new culture's gateway to the throne room of God.

The reason for discussing all this is that crop circles are very simple to explain with the Bible: the earth is responding to miraculous power gone awry. It is taking a snapshot of the crisis of personality experienced by people with miraculous power who are running from God. But the scientific explanation of how the

circles get there requires first that we understand the relevant scientific ideas of this age.

The speed of light that Einstein used to unite the four dimensions gives physicists a natural explanation for electricity. They simply model light as the specific frequencies of electrical and magnetic energy (which are related to each other very closely) that we can see. Since nothing can exceed the speed of light, this speed becomes the escape velocity from the third to the fourth dimension. That makes electricity the power that keeps the fourth dimension from interfering with the other three, something like a firmament (Gen. 1: 7). In the studies on nephelim science, we will see that one of the sins of the nephelim (Gen. 6: 2) was to try to use this firmament for evil purposes. It was this technology that led God to choose the flood as their destruction. This is because God had made the firmament controller of the waters. But, in our scientific technology, we place our faith that should be used to control the earth behind science, and science tells us that electricity opens the door to the higher dimension, which is the only place left by our scientific age for faith to reside. Our faith, channeled by science, makes earth respond electrically, and that's what powers the formation of a crop circle.

UNFULFILLMENT AND POWER CONES

When we serve God, our whole disposition changes. About 270 AD in the early church at Rome, according to the first church historian Eusebius of Caesarea, they had two kinds of members: elders and the poor. Elders were those who had been saved for some time and witnessed by their prosperity, their demeanor, and their fruit, the glory of God. The poor were the recently saved. They were just learning how to be healed, how to show love, how to be upright and honest even when the whole world was against them. They were taking baby steps in their new walk with God. How sad it is that in the twentieth century we use only one word, "Christian", to describe those who have given their lives to Jesus. The world looks for fruit but sees unhealed, broken people bearing the name of "Christian". Disillusioned, it looks no further for the "elders" in the Body. Not being able to separate the mature from

the immature, people find Christianity unappealing and look elsewhere to fill their spiritual needs.

The power of God creates a real change in people, and in time, the change surrounds them. The medieval artists drew a halo to indicate the visible presence of God. Today, some call it "good vibes". Occultists claim they can see it, and call what they can see the aura. But, call it what you will, it is real.

Satan, ever at work to counterfeit the gifts of God, is not to be outdone. He gives his servants "vibes" too. When a witch coven sets up vibes produced by their soul power in the lower heavenlies (the realm of thought, motion and fantasy) they call it a "power cone".

Soul power is difficult to explain in modern English. The proper understanding requires separating the two words "spirit" and "soul". While both Hebrew and Greek have many more words than these for the various parts of the human being, these two are enough for our purposes. Since ancient times, it was thought that for people to be fully alive and doing God's bidding, the "spirit", which is constantly in communion with God, must inspire the "soul", which then has the power to move the body into compliance with God's plan. That is why we say you save your "soul". The original meaning was that the soul turns from being moved by earthly perceptions to being moved by the message of God implanted in the spirit. This complete about-face rendered in Greek by the term "metanoia" is the source of the English term "conversion" or "turning around". It also explains why it takes time for the power of God to completely change a person's life: the material world is time dependent, and the body is the last thing to be effected.

Witchcraft, by definition, is the disorder of trying to force the spirit to be moved by the soul, which is inspired by the drives of the body. This is the exact opposite of the process God intended.

If we trace this concept back to Genesis 1, we note that God commands the EARTH to bring forth the souls ("nephesh" in Hebrew) of the animals. God then works with earth ("Let US make man...The US is God and earth) to create Adam. At this time, the term "earth" refers not to the round ball of dirt, but to the infinite dimensions God has just ordered; man has yet to be

expelled from the garden and land in the four dimensional world. (Many modern Christians would call this heresy. But it is the exact teaching of the Jews and educated early Christians. Philo of Alexandria tells us that "Enosh" was the first man, and "Adam was an archetype". The name "Enosh" means "man". It was in his time that man first called to God by name (Gen. 4: 26, for earlier man had not yet felt the alienation of being on earth.) The Jewish calendar is dated not from Adam, but from Enosh.) It is the nephesh God molded. Man is "Adam" meaning "red", not because of his "pink" color (how much that misunderstanding has been used as a Biblical basis for racial hatred!), but because his soul enjoys the ability of rising to God, as astronomers tell us that the fastest moving things still visible on earth enjoy the "red shift". Thus is blood red, since God molded the soul created by earth to be able to accept the ability to fly towards Him through the heavenlies. The earth (meaning the "stuff of soul creation") provides a soul which is adjusted by God, into which He blows His spirit. "Spirit" and "breath" are the same in Hebrew; both are rendered "ruah". Thus man becomes a "living being". All of this tells us how our power to mold the earth comes about: our spirit hears from God, then our soul responds (if sin doesn't interfere), then our soul leads our bodies. But, since earth was the developer of souls, it can be (and often is) affected before the body, either because sin blocks the soul from trying to change the soul because it has heard from God, or because sin or lethargy blocks the body from responding. Science can not see the blocked spiritual energy released in this process because it has chosen not to, but if the earth responds to the primitive and original connection it shares with the soul (although the active soul power is photographed in "Kirlian photography" and is well documented), it will change, and science can see the result. This is the process called "soul power", which, when abused, causes hauntings, whatever success there is in fortune telling, and various unexplained "occult" phenomena. In fact, experiments have shown that it is possible to create structures made of soul energy. Inert ones are called "power cones"; moving ones are frequently confused with demons, and occasionally even serve as homes to these fallen angels. They give rise to various phenomena, such as poltergeists and teleportation. In the 1970's,

led by the Toronto chapter of the Society for Psychical Research, a number of these creatures were created, and some even appeared on television documentaries.

EARTH RESONANCE

It is a fundamental principle of science that all things, if left to be free to move in all but one or two ways, will if sufficiently shaken, eventually settle into a state of vibration. Vibration simply means that the same movement happens again and again, creating a regular pattern. For example, if you try pulling on your backyard clothesline and then let go, it will snap back quickly, but within a second or so shake up and down regularly between the two fastened ends; it may even produce a low musical tone. Waves of the ocean have vibration, because the shore fixes where they cannot change, so the remaining space for motion is what is used. The whole system, never changing, is forced to repeat. The atoms that make up matter have circular vibrations. When the source of vibration in a second object is a similar vibration in a first, we say the second resonates with the first. Musical notes are vibrating movements of air that create resonant eardrum movements that create resonant brain patterns. The opera singer who breaks a glass does so because the size of the glass makes it want to resonate at the note she is singing (the glass is fixed by not existing past where its body ends). When that note stimulates it, the glass resonates and repeated vibrations overwhelm the ability of the glass to stay together. For the same reason, when soldiers march across a bridge, they break step on purpose; if they did not, the bridge would resonate and fall to pieces.

The importance of knowing about this concept is that the random electricity surrounding the three-dimensional space we live in loves to be in resonance. Thomas Edison found out very early when he tried to send regular DC battery current into people's homes that it didn't travel much further than a couple blocks. The resonant AC current that we use now easily travels hundreds of miles through power lines. Lower powered resonant current is easily reflected by parts of the earth's magnetic field (Technically it is reflected from electrical charges held in place in the

atmosphere. These are held in place by the magnetic field.), and is exploited for short-wave radio transmission. Rapidly resonating medium power electricity is called "microwaves" and is enough to make water molecules in food jump around in resonance fast enough to cook our dinner.

Vibration may be measured in either of two ways. If we measure how fast the pattern repeats, we take a "frequency" measurement. If we measure how far the pattern moves before it repeats we get a "wavelength." Because the speed of light is constant, the speed of repetition must increase as the distance of repetition goes down. Scientists can calculate one if they know the other. Since atoms vibrate also, every atom, hence everything composed of atoms, has a fundamental frequency and wavelength. The soul which follows a body projects that frequency into any power cone it may create. (Witches exploit this fact when they use divination to find out who cursed them. That is also why witches feel safer from retaliation in a coven. Combining vibration patterns creates a less identifiable resonance pattern when they mix.)

HOW TO MAKE A CROP CIRCLE

A crop circle will be created whenever three things line up in a straight line in four-dimensional space, and are separated by a wavelength compatible with the resonances in the first two. The three things in order are:

1. A strong static electrical field, such as the type surrounding microwave transmitters and power transformers. That is why there were almost no crop circles before the twentieth century: there were no such fields, except a few created by lightning absorption in metal buildings.
2. A power cone that is capable of deflecting the electrical field at a suitable angle into hyperspace. That is why crop circles appeared first in great numbers in the 1980's, and then in England. The anti-witchcraft laws were first repealed just prior to that time, and, of countries with electrical power grids at the time, England had the most witches per unit of area.
3. Conditions right for a thunderstorm over a field containing any nearly mature crops capable of being bent in a thunderstorm. Or,

any media soft enough to take an impression, like snow or forming ice, as circles noted since 2000 AD have been.

A crop circle is caused in the following way: A power cone flips a man-made static electrical charge into a higher dimension. The charge acts on the naturally occurring cloud-ground charge that creates a thunderstorm. The storm occurs, but is not a typical thunderstorm, since it is occurring in the higher dimension and only part of it is visible in our three dimensional space. The time dimension (duration) element of the storm becomes a circular motion, since it is powered by a static charge. The forward west-east motion of a typical thunderstorm becomes a time-space movement that often creates a red shift, giving rise to the red lights seen over crop circle areas. The lightning moves in space-time, causing a breakdown in the consistency of atomic resonance in the plant stalk, which is why it bends permanently. This breakdown is seen in authentic crop circle grain stalks viewed under a microscope. The winds, normally horizontal to the earth in a storm, blow vertically down onto the stalks, bending them. The pattern in the circles comes from the psychological pattern in the power cone, since the static field is "strained" through the power cone. This is much like sunlight shining through a hole in a window shade. The process takes a picture of the crisis that the person(s) causing the cone experienced, and this picture is recorded in the shape of the crop circle.

The forces that occur in a forming crop circle are not strong enough to affect mowed lawns, dirt, or concrete. If a human being were caught in one, he would most likely just feel a whirlwind and get his shoes wet. I have had both happen. I have also seen circles lightly pressing down Upstate New York's super light "lake effect" snow. I have also been able to read the patterns in crop circles, if I knew enough about the spiritual problems of the community in which they have occurred. I have also felt the electrical charge in the air when I was near the power cone resonance point as a crop circle was forming.

CIRCLES TRUE AND FALSE

Many circles are hoaxes. Those of course, are formed by pranksters stepping on boards. Real crop circles have two pieces

of evidence that are used by scientists to tell them from the fake. They are:

1. In authentic circles, there is molecular change at the stalk bend. This has been explained above.
2. In authentic circles, there is residual magnetic activity in the circle that can be recorded on audiotape. The model described above also easily explains this.

As proof of the theory offered here, I offer a third, not yet documented in the literature:

3. The circles in authentic crop circles are not true circles. They are slightly flattened so that it is possible to measure at least one "diameter" that is exactly one-third the length of the circumference. I call these circles "circles of three".

Specifically, with any true circle, if you measure it across at the widest point, and then divide the distance around by the measurement you just made, you always get the number 3.14159265 approximately. Mathematicians know that we cannot write the number exactly, so they give up and just call it "pi". Now if you draw a fake "almost" circle that is a little flat, and try measuring it across, you will get a different measurement depending where on the circle you measure. Normally, the measurement divided into the distance around will run between 3.1 and 3.2. But, if you draw the circle just right, you can make it so the number comes out to 3. That is what I mean. All the circles in real crop circle formations that I have checked are that kind of extreme circle.

CIRCLES OF THREE, THE DEAD SEA SCROLLS AND ANTEDILUVIAN TECHNOLOGY

The calendars of 4Q320's and 330's of the Dead Sea Scrolls wish for the return of the time when the year was supposedly 364 days long. Both the Egyptians and the Mayans consider a proper year 360 days with an extra 5 non-days at the end. Further, the Mayans have a second calendar of 260 days. Many ancient cultures felt that there was something wrong with the number of days in the year.

Long before the books of the Bible were settled on (in the Old Testament case in 195 AD), "inspired" book collections were

flexible. One of the most famous books that almost got into the Bible was the Book of Jubilees. The defenders of Masada considered it inspired, as did many early Christians. Chapter 6 of The Book of Jubilees explains the calendar paradox. In God's eyes the year is supposed to be shorter. We corrupt it by our sin.

The oldest complete mathematics text that we have is called the Rhind Mathematical Papyrus. Our copy was published in about 1700BC, but that was a later edition. Portions of it suggest that it may go back to 3200BC, and if it is the document mentioned in Jubilees 8: 3, it is a major key to the technology of the wicked nephalim of antediluvian (the word means "before Noah's flood") times (Gen. 6:4). The Rhind Papyrus takes a vague view of the number pi, because although it lists the value 3.14, etc. as the "principle value", it is comfortable with values AS LOW AS 3. Until very recently, graduate schools in mathematics were regularly teaching that the Great Pyramid could not possibly include the correct measurement of pi because "the Hebrews believed pi was 3 exactly, and the Egyptians built the Pyramid at an earlier date, and so could not have been any smarter than the Hebrews at that time". The only thing that stopped this nonsense, by the way, was the recent development of laser measuring technology that proved that the measurement of pi in the Pyramid was in fact correct. Given all this, we are forced to a new hypothesis: The Egyptians knew about and used 3.14 for pi on purpose. The Westcar Papyrus recounts the story of the number's recovery (called there the "measure of the house of Thoth") from the data repository at Onu, where Joseph was so well connected (Gen. 41:45). The Egyptians had a good reason for using the right value - archeology teaches that before the flood, the dead were buried in round burial mounds of dirt. By making the mounds out of stone, they would survive the flood (Josephus mentions the problem but not this solution. Since science refuses to believe in the flood, they cannot explain the use of the measurement in the pyramids). Since antediluvian technology did not allow round shaping of stone, they did the next best thing, and went to a square-base mound of the same size. The engineering genius who figured out how to do this, Imhotep, was later called a god in Egypt. So Joseph must have known all this, as must have Moses, having been

educated in Pharaoh's palace. Hence, the Hebrew's choice of 3 as the value of pi was DELIBERATE. The motivation was probably spiritual. Having made a mistake on the number of days in the year, they were not going to make a mistake on the value of the circle, since 3 is well known to be "God's number", and the ancients all thought God works in circles, since the planets move that way, and the planets are in heaven, closer to God. Besides, circles for God are logical, since God loves each person equally, and the circle is equally distant from the center at all points. Pliny gives both these proofs in his 60AD encyclopedia called "Natural History", as proofs that the earth is round. The first is used by Aristotle to lay out the solar system.

The circle of three is part of antediluvian technology, apart from Egypt also. The circles of stone in Stonehenge are circles of three. Celtic legend relates that foreign people who came to the British Isles designed these monuments. The Bible mentions these people in Genesis 10:5. This passage is translated incorrectly because no one suspects the real meaning. The Hebrew says: "By these (sons of Japheth) were the boundaries (a proper translation of "ia" will be given in other studies) partitioned according to their traditions and lineages in each nation." The traditions of India, China, etc., witness a deliberate migration of Babylonians (incorrectly called Aryans) in about 2400 BC. The Babylonians are the cultural heirs to the mathematics mentioned in Jubilees.

The point is that from ancient times the world felt that circles should be circles of three, but the size was altered by sin. So the crop circle, being shaped by energy generated from unfulfilled psychological needs, conforms to the pattern lodged away in our consciously forgotten cultural memories.

CROP CIRCLES – CONCLUSION

So, are crop circles a message from earth? Yes, if the message is "You still have authority over me. I need you to use it."

Are crop circles created by extraterrestrials? Yes, if you mean our souls, which are not of this planetary ball of dirt.

Can crop circles be explained by science? Not unless our scientists are willing to broaden their perspective to include faith.

Does any of this contradict the Bible? No, not if you read it carefully.

Is there anything to be afraid of? Not if you're the government or any other earthly creation of man. Project Bluebook was right to conclude "extraterrestrial close encounters" such as crop circles pose no threat to the structures of political power. The only threat mankind has on earth is Satan and mankind's own desire to sin. Crop circles expose that both are very much alive, as the circles themselves expose how far out of God's will some people are. The "alien" and "conspiracy theory" hypotheses expose how Satan is giving us new deceptions regarding where we came from and who our God is. Far from being anything to fear, the presence of the circles is a challenge to overcome our ignorance of God's Word, and our own seeming inability to live by it.
